

Task 2

1. Design a responsive webpage using HTML5 and CSS3 with the following requirements:

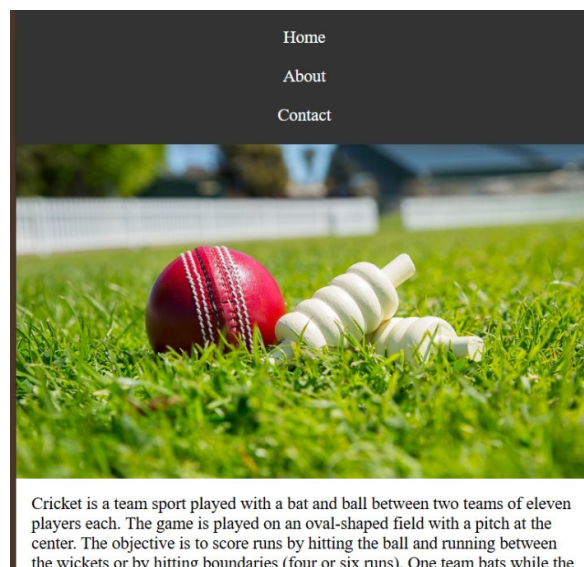

GitHub Repo:- https://github.com/Siddhant40/Worldline_tasks/tree/main/navbar

Live Demo :- https://siddhant40.github.io/Worldline_tasks/navbar/

Screenshots:-

Responsive Design:-

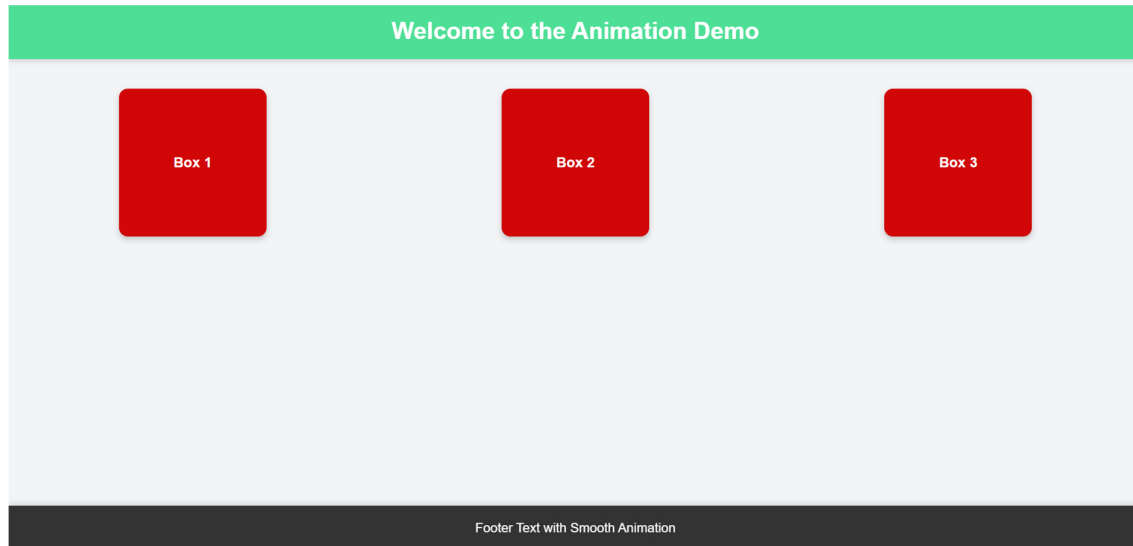

2. Create a webpage that demonstrates CSS3 animations with the following requirements:

GitHub Repo:- https://github.com/Siddhant40/Worldline_tasks/tree/main/css_animation

Live Demo :- https://siddhant40.github.io/Worldline_tasks/css_animation/

Screenshots:-

Result:

- 1) When you load the page, the header will fade in and slide down.
- 2) Hovering over any of the three boxes in the main section will cause them to rotate 360 degrees.
- 3) Footer has a "fade-in from the bottom" effect. This makes the footer smoothly slide into view as the page loads, creating a cleaner and more modern feel.
